Key Findings Summary

Finding	Value
Average BMI	28.69
Diabetes Prevalence	15.29%
High BP Prevalence	45.4%
High Cholesterol	44.2%
High Risk Cluster Size	54.4K
High Risk Diabetes Rate	33.2%
Physical Activity Rate	73.3%

Top Risk Factors — Diabetes Prevalence Rate

01

High-Risk Screening

Prioritize screening programs for individuals with heart disease, stroke history, and mobility difficulties, as these groups show the highest diabetes prevalence.

02

Physical Activity Programs

Promote physical activity initiatives to reduce diabetes risk among inactive populations. targeting the 26.7% who report no physical activity.

03

Cluster-Based Interventions

Target high-risk clusters with preventive healthcare interventions and lifestyle education programs, focusing on the 54k individuals in the high-risk segment.

04

Cardiovascular Risk Management

Focus on blood pressure and cholesterol management programs to address major risk factors. affecting over 40% of the population.
